## Extension Plate

The Mortise Master Extension Plate will allow for offsets from 1-3/4" to 3-1/4" in 1/4 inch increments (the standard slide plate has a 1-1/2" maximum offset).

When mortising stock wider than 3-1/2" clamp the fixed clamp plate directly to the stock. Insert a shim the same thickness as the leveling lip on the fixed clamp plate as shown below. This maintains a level platform for the router. Obviously, the Auto center function is not available in this configuration.

Note: Never clamp on the leveling lip or the clamp plate can be damaged!

Thanks for choosing ***Mortise Master!***
